

Remote Desktop

You no longer have to spend a small fortune with traditional in-house IT infrastructure. We can offer you access to affordable high end computing power tailored to your needs and keep your data safe and secure.

Remote Desktop Services

Remote Desktop Services allows a user to access applications, data and even an entire desktop running on a remote computer over the Internet. The client access device can either be a full rich Windows personal computer, Mac OS, Tablet or smart phone.

How does Remote Desktop work?

Remote Desktop Services works by allowing individual applications or an entire desktop to run on a server, rather than on the user's workstation. By doing this, Remote Desktop Services allows clients to run applications or desktop environments that they might otherwise not have the hardware or bandwidth to support.

BENEFITS

Security

Remote desktop is provided from our fully secured Tier III data centre designed to meet strict industry best practice criteria.

This allows us to offer a high availability, fully redundant and highly resilient infrastructure with no single point of failure.

Accessibility

Our remote desktop solution delivers your windows applications to wherever you are at any time whilst providing you with maximum security and control over your data.

Control

We provide centralized control policies to ensure that select users connect to specific applications and data, and that only screen updates, mouse clicks, and keystrokes no data needs to transit the network.

Encrypted Delivery

Your data is encrypted during transmissions and delivered through a highly secure appliance to protect your company's information.

KEY FEATURES

- Windows 7 Hosted Desktop
- Enterprise Exchange 2013 Mailbox (25GB)
- Microsoft Office 2013 Standard and Professional
- Secure Tier 3 data centre
- Expert UK tech support
- Services tailored to your needs
