

Protect your Intellectual Property with Email Archiving

80-90% of your company's intellectual property passes through email. Here's how we help protect it. Your ideas, your strategies, your secrets - they're all in your email.

The average Exchange user sends 50 MB of email per day. This creates a huge repository of intellectual property that must be closely protected - through the lifetime of your company. Intermedia's Email Archiving keeps your email securely archived and easily accessible using HostPilot, our central control panel. Better still, Email Archiving does so without adding complexity to IT or disrupting the way your employees communicate. Here's how:

- 1) It captures all your mail traffic. Email Archiving automatically captures and stores every email sent and received by every mailbox that has activated this service. This includes emails sent across mobile devices and the Outlook Web App as well as those sent via IMAP or POP accounts.
- 2) It makes all your data easily accessible. Archived email can easily be searched. Users can search their own email, while administrators can search across the company. You can even search within 500+ attachment types to find the information you seek.
- 3) It preserves the contributions of former employees. Every business has turnover. With Email Archiving, you retain the ability to search through deactivated accounts to find critical information and keep projects moving forward.
- 4) It helps you find leaks. Our WORM-compliant media assures long term, tamperproof storage. Which means that employees who accidentally or deliberately leak intellectual property via email cannot cover their tracks.
- 5) It simplifies disaster recovery. What happens if all your computers fall victim to a virus? From an email standpoint, recovery is simple. That's because your entire history of email-based intellectual property remains stored and recoverable from our tamperproof archiving service.

80-90%

of your corporate IP resides at one time within email or attachments. Source: Gartner.

What intellectual property is contained in your email?

- R&D strategies, techniques and findings
- Operations plans and procedures
- Security plans and any discussion of vulnerabilities
- Finances - including budgets, salaries
- and proprietary corporate data
- All your executive discussions and decisions
- And much, much more
